PRESONUS DCP8 + MB8

PreSonus Audio Electronics, a dynamics processor specifically designed to enhance your console with features that, yesterday, only the "big boys" could afford. To be precise, the DCP-8 is an eight-channel, digitally controlled analog dynamics processor. Plug the DCP-8 into your insert points before or after your multitrack and you'll have a compressor/limiter on every channel, a noise gate on every channel, automated faders and mutes plus snapshot mix automation. Built-in software in the DCP-8 allows assignment of up to four subgroups, stereo linking (up to four pairs), full MIDI control, pro to line level conversion, solo on any channel, as well as naming, loading and storing of 100 audio "scenes."
