Effetto Doppio Delay/Riverbero per Chitarra Elettrica

• Improved DSP algorithms for superior delay and reverb quality

• Nine distinct delay types that support up to 2 seconds of delay time: digital, analog, tape, echo, liquid, rainbow, crystal, low-bit, and fuzzy delays

• Nine hi-fidelity reverb types: room, hall, plate, distorted reverb, flanger reverb, filter reverb, reverse, spring, and modulated reverb

• Freeze feedback feature, supported for both delay and reverb effects

• Tap tempo footswitch functionality

• New and improved looper supporting up to 120 seconds of recording time, along with overdubbing capabilities, half-speed, and reverse effects.

• Customizable order of effects in parallel or series chains

• Flexible bypass options supporting both true bypass and DSP bypass

• Large LCD screen, controllable through twelve easy-to-use physical knobs for real-time parameter adjustments.

• Adjustable Global EQ Settings

• Full stereo inputs and outputs

• Synchronizable and mappable MIDI In and Thru support

• USB-C port for firmware updates

• External expression pedal support via TRS cable

• Support for the MOOER F4 wireless footswitch (sold separately)

• Designed for durability and reliability in both studio and live environments.
